Millennial Vision Inc. Releases Enhanced Version
of its Document Capture System v2.4

MVi's enhanced DCS v2.4 provides financial institutions with faster, more streamlined loan processing, and the ability to have electronic document images appear exactly as they would when printed on a HP LaserJet (PCL) printer.

SALT LAKE CITY — May 21, 2009 — Millennial Vision Inc. (MVi), a national reseller of Laserfiche document management solutions and provider of paperless technologies to financial institutions, released the latest version of its Document Capture System (DCS) v2.4—a solution allowing users to capture print documents electronically and become paperless.

MVi's newest version of DCS allows users to digitally capture their documents—including Membership Cards, Loan Documents and most other Windows or Unix PCL printable documents, add electronic signatures and other required annotations, and automatically store them into their document management archival system, creating a seamless process for the user.

MVi's DCS product also provides financial institutions with remote signature capability between branch offices so the loan process can be completed faster, helping reduce the account holder's wait time.

DCS v2.4 is significant because MVi has partnered with Tech Know Systems – a leading provider of PCL (Printer Control Language) emulation software for the electronic document delivery industry – to integrate its JetPCL® technology into DCS v2.4.

The JetPCL component enhances MVi's DCS product by automatically handling the PCL conversion, providing the user with a straight-through-process. DCS v2.4 now has greater processing capabilities, including improved accuracy, higher-quality images, and faster speed.

The enhanced accuracy of DCS v2.4 is important to financial institutions that require loan and other pertinent documents to appear exactly as they would when printed on an HP LaserJet (PCL) printer.

"Our goal is to provide financial institutions with the best products possible," says Bill Poulter, President of MVi. "We feel that our DCS v2.4 release provides users with greater capabilities, allowing them to streamline their processes and become more efficient. We look forward to our new partnership with Tech Know Systems and feel that their JetPCL technology has played an important role in helping us improve our DCS product."

About Millennial Vision Inc.
Salt Lake City-based Millennial Vision Inc. (MVi) was founded in 1996 with a mission to provide quality products and services in the document management sector. Its vision is to help organizations "go paperless," committing to deliver technologies that empower staff members to create efficient document workflows. MVi offers more than imaging with a product suite that enables customers to replace paper-based processes with digital document management. For more information, visit www.mviusa.com or call 801-277-6686.

About Tech Know Systems Inc.
Tech Know Systems Inc. is the maker of JetPCL®, a PCL language emulation product for software developers. JetPCL is used for converting PCL data (HP LaserJet printer data) into images for viewing, faxing, emailing or archiving. JetPCL is integrated into many industry-leading products and has been converting PCL data fast and accurately since 1991.
JetPCL supports:

   * PCL-4, PCL-5, PCL-5-Enhanced, HP-GL/2 and PCL-XL input formats
   * Adobe Acrobat PDF, TIFF Class-F, Group 3/4 fax output formats
   * All Windows Win32 platforms and many Unix and Linux platforms

JetPCL is available for integration into new and existing products.
A JetPCL Evaluation Kit is available at http://www.jetpcl.com or call 406-862-1435 for more information.
